Asbestos Awareness

The asbestos awareness course is a two hour lecture on the subject of asbestos, which will give the students a working knowledge of a material known to cause cancer and other health effects.

The course is aimed at both, tradesmen intending to work in buildings where the building fabric is disturbed, managers and staff of buildings that may contain asbestos materials.

The subjects covered are:

What is asbestos, the types of fibres, where does it come from, why was it used, where was it used (materials and applications), material friability, material density, asbestos content, AIB and its varied uses, pipe insulation, sprayed coatings, other materials.

Why is it a problem, health problems and diseases, how big is the problem

Asbestos surveys and asbestos management

The Control of Asbestos Regulations 2006, the duty to find, the duty to manage, the duty to inform, asbestos management.

Video: How are you managing? (HSE video)

Logical steps to apply when working in buildings, safe working on and around asbestos materials, assessing the risk, controlling the risk, what to do if accidental damage happens.

Summary and questions

The students will be given an asbestos awareness certificate of attendance showing the subjects covered.
